CCC Online Training Program

Your assets, processes, and plant safety are important to you. That is why personnel competency is consistently ranked among the top priorities by plant managers. But maintaining and improving your team's domain knowledge can be challenging.

Challenges we've heard from you

"We have been tasked with a new expansion project, and need to bring several project engineers to a basic level of understanding in a short amount of time."

"Our plant engineers found your on-site and regional training classes very valuable. What we need now is a refresher available on-demand."

"Is there a way to test the competency of our personnel and give them the tools to be proficient in compressor controls technology?"
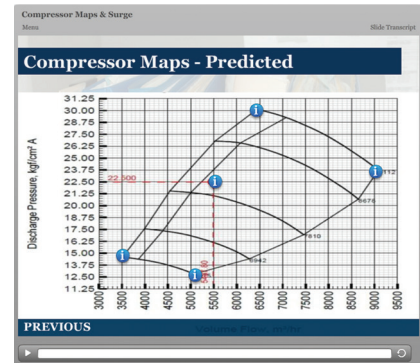

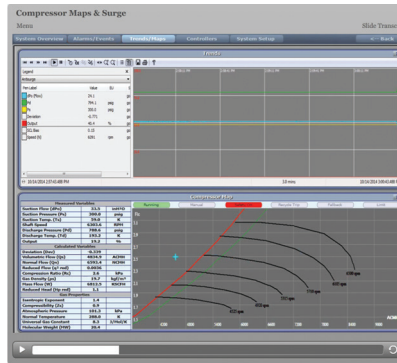

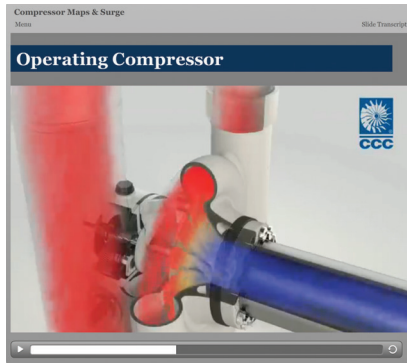

We want to attend your scheduled class, but can't fit it in our schedule. Is there a way to obtain some basic training in the mean time?"

"Do you have a way to give us basic compressor controls technology understanding prior to our scheduled on site hands-on training?"

A New Blended Learning Experience from CCC

Achieve your desired level of competency on:

- Compressor Maps and Surge
- Antisurge Control Theory
- Performance Control Theory
- Speed Control Theory

- Advanced TrainTools/TrainView HMI
- CCC Controller Configuration
- Logic Programming
- CCC's Piping & Instrumentation Best Practices
